

MotioADF Data Sheet

Orchestrate, Integrate & Collaborate BI Systems

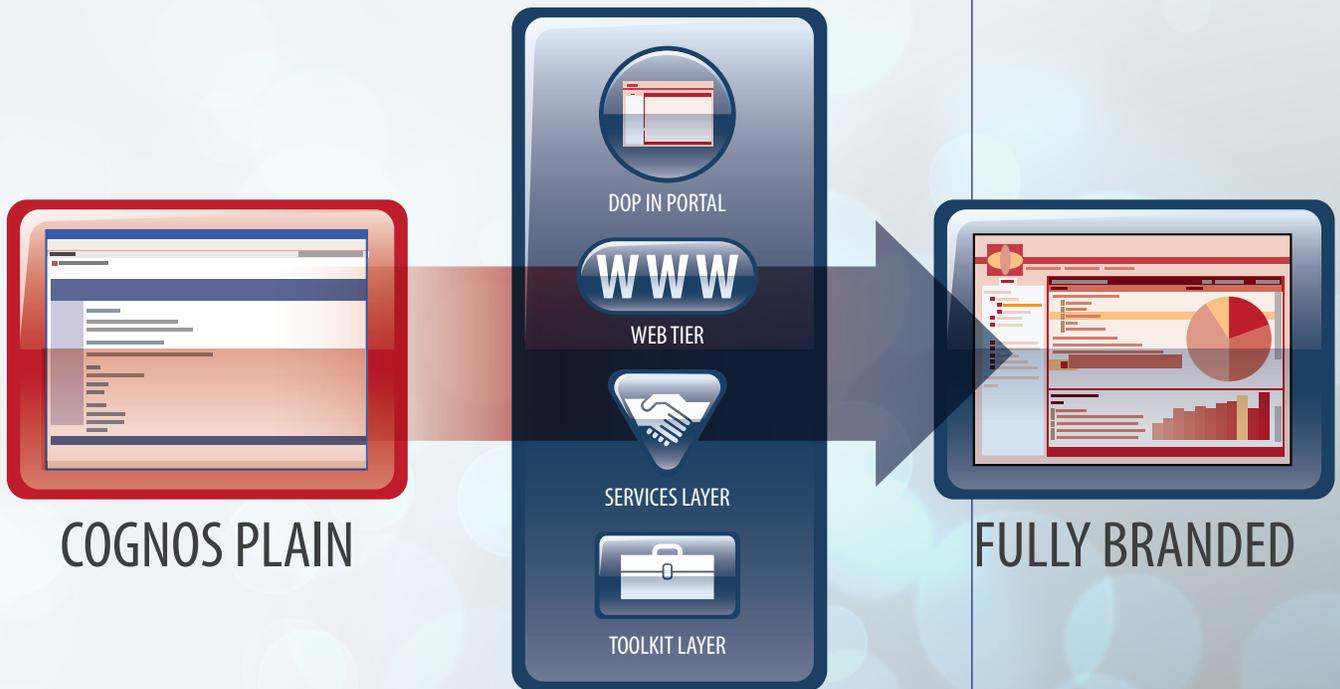

MotioADF is a platform for orchestrating and integrating artifacts from disparate business intelligence systems into customer defined web applications. MotioADF allows organizations to create and rapidly deploy web-based solutions which integrate and extend BI assets from multiple systems along with additional capabilities defined by the customer.

MotioADF was founded on the principle that it should be easy to layer additional functionality on top of existing BI investments. MotioADF customers are frequently bringing innovative new features to market by leveraging the power of MotioADF combined with the capabilities of their existing BI systems.

Custom Web Applications

Many customers wish to leverage assets from their existing BI systems but surface those assets in a way that is far different from the provided method of the BI vendor. MotioADF seamlessly integrates BI platforms with the rest of the organization's portals and content, and becomes a fully functional customized alternative to the default vendor experience.

MotioADF™

MotioADF Data Sheet

Orchestrate, Integrate & Collaborate BI Systems

Single User Experience Across Multiple BI Platforms

Motio ADF provides a consistent user experience, which combines content from multiple BI systems. Customers may use MotioADF to provide seamless access to several unrelated BI systems in a clean and uniform manner. For example, access Cognos, Microstrategy, and Tableau all from the same BI portal.

Collaboration Around BI Outputs

MotioADF's collaboration feature allows users to quickly share ideas through ADF. A user can make an annotation, which acts as an over-layer, and select the desired audience. Selected users will get a notification, and can add additional input. Users can collaborate in and around the data, where all the information already exists.

Opening inventory	Quantity shipped	Additions	Closing inventory	Unit cost
5566	2344	2,590	5812	\$1.92
21139	7789	10,017	23367	\$23.53
6934	2854	3,205	7285	\$46.09
10381	5588	6,167	10960	\$88.21
12301	5483	5,944	12762	\$41.20
97903	39700	41,789	99992	\$2.42
37501	11562	12,798	38737	\$2.33

Controlled Self-Service for Canned Reports

MotioADF empowers end users with the ability to make controlled and targeted customizations to configured BI content without requiring the training to do so in the authoring tool of the BI vendor. This feature bridges the gap between professionally authored BI content and end user self-service requirements.

Near Real-time Updates to BI Outputs

The MotioADF Data Pulse Service allows BI outputs to refresh when their underlying data changes. Refreshes are triggered by server-side events, not client-side timers. Near real-time updates allow stakeholders to react quicker to changing information.
