

Enabling the Most Accurate and Reliable IBM Cognos Implementations

Motio, Inc. is a global software company and IBM Premier Business Partner. At Motio, we develop software solutions that enable the most accurate and reliable Business Intelligence implementations. We don't make BI software, we simply make it better.

Since 1999, Motio has been a home for professionals who are passionate about the art of software development. Our mission during this time has centered around building innovative solutions which improve the lives of our customers. We don't just do this for a living, we do this because it is our passion.

A Commitment to the IBM Cognos Community

Motio committed to offering a free product that provides utilities to the IBM Cognos market. In 2008, Motio launched MotioPI™, a free tool that empowers Cognos professionals with a more efficient way to manage their BI environments. MotioPI has been widely adopted throughout the Cognos community. In 2015, MotioPI for IBM Cognos TM1™ was introduced. A product parallel to its BI counterpart, MotioPI-TM1 offers better insight by easing the effort it takes to interrogate Cognos TM1 environments.

Products for IBM Cognos TM1

MotioPI-TM1: Interrogate TM1. The FREE tool for Cognos TM1 enables users to retrieve answers to questions about their TM1 environment in a more efficient manner. Find obsolete objects that waste memory, and use querying capabilities to quickly find information.

QUBEdocs™: TM1 information governance. Motio is an authorized distributor of QUBEdocs, the model management solution for Cognos TM1. It provides a greater understanding of how TM1 models hang together, the impact that model changes can have, and provides automated documentation necessary for auditing purposes.

Enabling the Most Accurate and Reliable IBM Cognos Implementations

Products for IBM Cognos BI

MotioCI™: Proactive, accuracy, safety-net. MotioCI is the first and only integrated life-cycle management system providing automated version control, streamlined release management, and continuous BI testing for IBM Cognos. MotioCI delivers complete governance, risk, and compliance management.

MotioADF™: Custom visualizations. Quickly and efficiently unify multiple BI systems (Cognos, Microstrategy, Tableau, etc.) into one customized web application. MotioADF empowers IBM Cognos customers with the capability to integrate new features and capabilities on top of IBM Cognos products.

ReportCard: Optimize Cognos performance. Identify inefficiencies in your BI environment, automatically apply improvements, and test the amount of stress your implementation can handle.

MotioPI™: Ease Cognos administration. The FREE tool empowers Cognos professionals to more efficiently manage and retrieve information from their BI environment.

MotioPI Pro: Bulk update Cognos. Rapidly initiate administrative actions across large numbers of Cognos reports, queries, properties, users, etc.

Persona IQ®: Consolidate Cognos namespaces. Seamlessly transition Cognos between external authentication sources without changing Cognos content or breaking the existing security configuration. Safely migrate Cognos content, models, and configuration from one authentication provider to another (e.g. Series 7 to Active Directory).

MotioCAP™: Integrate security. Leverages existing, unsupported security sources for Cognos authentication and authorization. The MotioCAP framework easily maps Cognos authentication to nonstandard security sources such as relational databases, web services, etc.

SDK Services. Motio offers professional services for Cognos SDK and mashup implementations. Motio's SDK experts have guided hundreds of Cognos customers to integrate Cognos in new ways.
