## Enabling the Most Accurate and Reliable IBM Cognos Implementations

Motio, Inc. is a global software company and IBM Premier Business Partner. At Motio, we develop software solutions that enable the most accurate and reliable Business Intelligence implementations. We don't make BI software; we simply make it better.

Since 1999, Motio has been a home for professionals who are passionate about the art of software development. Our mission during this time has centered around building innovative solutions which improve the lives of our customers. We don't just do this for a living, we do this because it is our passion.

### Products for IBM Cognos TM1

#### Agni

##### Powerful Search Engine for TM1

Retrieve answers to questions about your TM1 environment in a more efficient manner with Agni's built-in searching capabilities. Find which cubes and dimensions are consuming the most memory. Export search results into Excel to ease security audits and documentation. See the impact of proposed security changes before implementing them.

#### Soterre

##### Version Control and Streamlined Deployments for TM1

Enable traceability and auditability by tracking changes in your TM1 environment. Gain visibility into change history of TM1 objects to reduce the time it takes to troubleshoot and fix errors. Soterre eliminates many manual steps in TM1 deployments, such as restarts, tracking changes in Dev by hand and then replicating those changes in Production.

### Products for IBM Cognos BI

#### MotioPI

##### Ease Cognos Administration Tasks

The FREE software empowers you with features that help you manage and retrieve information around administrative tasks in Cognos in a more efficient manner.

#### MotioPI Pro

##### Streamline Bulk Updates in Cognos

Eliminate many of the error-prone and time consuming tasks in Cognos. MotioPI Pro gives you a variety of features that help you make bulk changes across large numbers of Cognos reports, queries, properties, users, models, etc.

# Motio Software

## Products for IBM Cognos BI

### MotioCI

#### Version Control, Automated Testing, & Release Management for Cognos Analytics

Reduce risk. Increase asset delivery to end users. Eliminate unnecessary processes. MotioCI delivers complete governance and improves BI quality by tracking changes, streamlining deployments, and automating the testing of BI assets.

### Theia

#### Harmonize Your BI Systems and Data

Unify your organization's information systems (Cognos, Microstrategy, Tableau, Qlik, SAP, etc.) under one platform. Leverage Cognos data in other visualization systems, improve your user experience with all platforms, maintain governance over all your systems, and reduce costs for maintenance and training.

### ReportCard

#### Optimize Cognos performance

Reduce the time-intensive process of monitoring Cognos system performance. ReportCard identifies inefficiencies in your BI environment, applies suggested improvements, and tests the amount of stress your system can handle.

### Persona IQ

#### Seamless Transitions Between Authentication Sources in Cognos

Safely migrate Cognos content, models, and configuration from one authentication provider to another (e.g. Series 7 to Active Directory) by eliminating the manual and error-prone method of typical namespace migrations. Persona removes the manual mapping step and does not require changing any of your Cognos content when moving to a new authentication source.

### MotioCAP

#### Integrate Cognos with Unsupported Security

Leverage Motio's expertise when you need a custom authentication solution for Cognos (SSO, SAML integration, multi-factor authentication, etc.). The MotioCAP framework reduces the development and implementation time you would have to do if you built your own by as much as 90%.

### SDK Services

#### Leverage the Cognos SDK in a Variety of Ways

Motio offers professional services for Cognos SDK and mashup implementations. Motio's SDK experts have guided hundreds of Cognos customers to integrate Cognos in a wide range of ways.
